

# TroubleShooting Guide

## Electrical System

### Checking the Mower

TASK	INSTRUCTIONS	NOTES
Inspect Electrical Circuit	<ul style="list-style-type: none"> <li>- With the motor off: Unplug the clutch and attach a voltage meter to the connection Coming from the mower. Start the mower and Turn the PTO on (blade engage switch) Monitor the meter: 13.2vlt to 14vlt DC is normal.</li> <li>- Turn the PTO off: 0.0 vlt is perfect.</li> </ul>	<ul style="list-style-type: none"> <li>- PTO ON = Voltage is 13.2 DC Minimum</li> <li>- PTO OFF = Voltage is 0.0 DC</li> <li>- With the PTO switch in the on position the voltage should be between 13.2 &amp; 14VDC</li> <li>- If the voltage is different there is a problem with the mowers' electrical system.</li> </ul>
Inspect Electrical Connections	<ul style="list-style-type: none"> <li>- Remove the wire harness connector(s) Inspect and Clean each connection going to the clutch.</li> </ul>	
Inspect Wire Harness	<ul style="list-style-type: none"> <li>- Remove the tie wraps from the wire harness Look for pinching, chaffing, fraying or tares</li> <li>- Check the machine wire harness for damage.</li> </ul>	<ul style="list-style-type: none"> <li>- Look closely: This is a common failure</li> </ul>

### Checking the Clutch

TASK	INSTRUCTIONS	NOTES
Checking the Clutch Coil (Basic operations)	<ul style="list-style-type: none"> <li>- Apply 12vlt DC to the clutch connection &amp; watch to see if the coil draws the armature to the rotor (pulls the pulley inward)</li> </ul>	<ul style="list-style-type: none"> <li>- Some low torque clutches may not be able to overcome the clutch brake and will require resistance testing.</li> </ul>
Checking Clutch Resistance	<ul style="list-style-type: none"> <li>- Connect a Low Resistance (ohm) meter to the clutch wire connector. Compare the results to the chart below.</li> </ul>	<ul style="list-style-type: none"> <li>- A Special "4 wire" Low Resistance (Ohms) Meter is required. Normal voltage/ohms meters cannot read ohms this low.</li> </ul>
MODEL	TORQUE	RESISTANCE @70 F (Ohms)
MS-60 (5217-***)	60 ft. lbs (81Nm) Torque	6.82 to 7.54 Ohms
MS-80 (5217-***)	80 ft. lbs (108Nm) Torque	3.49 to 3.86 Ohms
TG2K-125 (5219-***)	125 ft. lbs (169Nm) Torque	2.70 to 2.98 Ohms
CMS-150 (5218-***)	150 ft. lbs (203Nm) Torque	2.34 to 2.59 Ohms
CMS-175 (5218-***)	175 ft. lbs (237Nm) Torque	2.18 to 2.41 Ohms
CMS-200 (5218-***)	200 ft. lbs (271Nm) Torque	1.75 to 2.00 Ohms
